Highlights

These are in our opinion the strong points of SaF IT Systems to support industry and defence related projects:

1. Deep knowledge of Air Defence in NATO, in various roles, for a combined total of 60+ years of experience.
2. Deep knowledge of in the field of Energy / Utility distribution and exchange
3. Development of systems in support of NATO air and maritime forces
4. In depth knowledge of NATO Tactical Data Links and Tactical data systems and Standards.
5. Extensive knowledge of data processing for Ground-Based Air Defence, both C2 and SAM systems (that involves radar tracking algorithms, radar accuracy analysis, radar simulation, engagement algorithms etc.).
6. Project management (Site/System Upgrade, Site/System Move, re-engineering, new deployments):
 - Project Analysis Definition/Project Support.
 - Project Implementation
 - Project Documentation
 - Project Verification/Acceptance/Closure
 - Project – In Service Operations
7. Customer Oriented :
 - Excellent and proven customer relations
 - Excellent and proven success records
8. Training:
 - For Operators, Administrators and Technicians
 - For Trainers
 - Preparation of training material

9. Ready to take up new challenges.

Company Size:

SaF IT Services does not plan to grow, even in this second phase. The manpower capacity is limited to 2, with Ms. FEDERICO providing secretarial and administrative support.

The offer

The overall project

SaF IT Services positions itself as a company that can offer customised solutions and support to satisfy other companies' IT needs. The main objectives are :

1. Provide quality services
2. Provide solutions that fully meet the needs of the customers

The main activity concerns the development of customised software solutions, however SaF IT Services can also answer customer calls concerning:

- Support to the various software testing phases
- Training
- Temporary replacement of personnel in specific areas of IT (where the competences can be provided)
 - Consultants' roles:
 - Project management / Team Lead
 - Software Development integrating existing teams
 - Hardware / Infrastructure projects
 - Internationalization/Localization
 - Requirements collection / analysis
